

TRAVELLERWAYS

DESCRIPTION:

Hydrological Services offer three Travellerways:

1. Monaro: 140kg. span 250m
2. Latrobe 90kg. span 120m
3. Barossa 50kg. span 60m

For short to medium term gauging studies, the Latrobe and Barossa Winches can be quickly mounted on the operating side support post, the discharge measurements taken and the winch packed up and moved to the next site. For permanent or long term installations, the winch is generally located in a hut. The Monaro is designed for permanent installations on large streams or rivers.

Hydrological Services gauging winches and travellers are based on the long established approach to obtaining current meter observations and sediment samples in streams. All winches and travellerways are manufactured under Quality Assurance Standards which are accredited to ISO 9001.

APPLICATION:

Used in locations where there are no bridges or the stream is unsuitable for safe boat gauging
